Leah,

I went through the anomalies noted on the gradient map and compared it to the surface debris map provided to the MDNR. I have noted the following associations.

600E,450N - two USTS
450E,640N - plating tubs
440E,660N - plating tubs
590E to 600E,790N to 810N - iron fence, 15,000 gallon tank
420E to 450E,800N to 830N - crane, iron at surface
360E to 380E,830N - west of "iron at surface"
450E,950N - gravel sorter, iron at surface
570E,1060N - between "mound,slope" and bulldozer

470 to 510E.1330N to 1360N - appears clear of surface debris 650E,500N - adjacent to "mound" 240E,900N - appears clear of surface debris
